

Provider Earnings & Withdrawal Flow

1. Provider Summary

Provider Dashboard will show:

- **Total Earnings**
 - **Available for Withdrawal**
 - **Pending Amount**
 - **Total Withdrawn**
 - **Transaction History**
-

2. Earnings Flow

Step 1 — Provider Hired

When a customer hires a provider:

Order Amount → Pending Amount

Example:

Order Amount = 50 SAR

Pending Amount = 50 SAR

Step 2 — Order Completed

When the order is completed and confirmed by the customer, Azhl will deduct its fee from the order amount.

Example:

- Order Amount: **50 SAR**
- Azhl Fee: **5 SAR**
- Provider Amount: **45 SAR**

Flow:

50 SAR Pending

↓

Order Completed

5 SAR → Azhl Fee

45 SAR → Available for Withdrawal

Azhl fee will be deducted from **every completed order**.

3. Withdrawal Flow

Provider or Marketplace can submit a withdrawal request from the available balance.

Available for Withdrawal

Enter Withdrawal Amount

Select Bank Account

Submit Request

Status = Requested

Admin Review

If Approved

Amount Returns / Remains in Available Balance

4. Transaction History

Transaction History will contain two transaction types:

Credit

Used when an order is completed and provider earnings are credited.

Label: Credit

Show:

- Order Title
- Order Number
- Gross Order Amount
- Azhl Fee
- Net Provider Amount
- Completed Date
- Completed Time
- Order Status
- Transaction Label: **Credit**

Example:

AC Repair Service

Order: #ORD-1025

Order Amount: 50 SAR

Azhl Fee: 5 SAR

Credited Amount: 45 SAR

Status: Completed

Transaction Type: **Credit**

Withdraw

Used for provider withdrawal requests.

Label: Withdraw

Show:

- Withdrawal Request ID
- Withdrawal Amount
- Bank
- Request Date
- Request Time
- Status
- Rejection Reason if rejected
- Transaction Label: **Withdraw**

Withdrawal statuses:

Requested → Accepted → Completed

or

Requested → Rejected

5. Transaction History API

Transaction History API must support **pagination**.

Example:

```
GET /transactions?page=1
```

The API should also contain a nullable filter.

Filter

```
filter = null | all | credit | withdraw
```

Behavior:

- `null` → Show all transactions
- `all` → Show all transactions
- `credit` → Show only Credit transactions
- `withdraw` → Show only Withdrawal transactions

Every transaction response should also contain a transaction type/label.

Example:

```
type: credit
```

or

```
type: withdraw
```

6. Complete Flow

```
Provider Hired
```

↓

```
50 SAR → Pending Amount
```

↓

```
Order Completed
```

↓

5 SAR → Azhl Fee

↓

45 SAR → Available for Withdrawal

↓

Transaction Added → Credit

↓

Provider Requests Withdrawal

↓

Transaction Added → Withdraw

↓

Status: Requested
